

AI Career Accelerator for Women

Empowering Women to Restart, Rebuild, and Thrive in the AI Era.

Week 1 – AI Foundations

Agenda

- Module 1 – Understanding AI
 - What is AI?
 - Generative AI vs Traditional AI
 - How Large Language Models work
 - AI myths and misconceptions
 - Pre-Built Agents vs. Custom Agents
 - Responsible and ethical AI
 - Privacy and security when using AI

What is Artificial Intelligence

AI is the ability of computers to perform tasks that normally require human intelligence.

Examples	Examples in everyday life
Understanding language	Netflix Recommendations
Recognising images	Google Maps
Learning patterns	Email spam filters
Making recommendations	Face recognition
Answering questions	ChatGPT
Generating content	

Traditional AI vs. Generative AI

Traditional AI	Generative AI
Predicts	Creates
Classification	Content generation
Detect fraud	Write emails
Recommend products	Create presentations
Forecast sales	Generate images
Analyse data	Summarise documents

How Large Language Models Work

In Simple Terms

Think of it like Autocomplete on Steroids

You type:

Learning AI is |

Phone suggests:

important

Then:

for the future

Then:

because it

And so on...

opens many new opportunities.

LLMs do the same — but at a massive scale, using everything they've learned.

Key Idea:

LLMs don't "know" things like humans. They predict the most likely next word based on patterns in the data they were trained on.

What AI Can and Cannot do

AI Can	AI Cannot reliably
Generate ideas	Know everything
Write content	Replace human judgement
Analyse information	Understand emotions like humans
Summarise documents	Guarantee accuracy
Answer questions	Take responsibility
Translate languages	

AI Myths and Misconceptions

- ✗ AI knows everything
- ✗ AI will replace everyone
- ✗ AI is always correct
- ✗ AI understands emotions
- ✗ AI is conscious
- ✓ AI is a powerful productivity assistant

What are AI Assistants?

An **AI Assistant** is software that uses Artificial Intelligence to help people complete tasks, answer questions, create content, and improve productivity using natural language.

What can AI Assistants do?

-  Answer questions
-  Draft emails, reports, and presentations
-  Summarize documents and meetings
-  Generate ideas and brainstorm solutions
-  Analyze data and explain insights
-  Write and explain code
-  Translate languages
-  Help plan tasks and schedules

Popular AI Assistants

Microsoft Copilot

ChatGPT

Google Gemini

Claude

Perplexity AI

What are AI Agents?

AI Agent = AI + Goal + Actions

An AI Agent can:

- Understand requests
- Make decisions
- Use tools
- Complete tasks
- Work across applications

Examples

- Travel Agent
- HR Agent
- Customer Support Agent
- Finance Agent

Pre-Built vs. Custom Agents

Pre-Built Agents	Custom Agents
Ready to use	Built for your business
Quick deployment	Uses company data
Lower cost	Connects to business systems
Better for common tasks	Tailored workflows

Responsible and Ethical AI

- Use AI Responsibly
 - Be fair
 - Be transparent
 - Avoid bias
 - Verify outputs
 - Keep humans involved
 - Respect copyright

Privacy and Security

Think Before You Prompt

Never share:

- ✗ Passwords
- ✗ Customer confidential information
- ✗ Financial records
- ✗ Personal information
- ✗ Company secrets

Use organisation-approved AI tools

Key Takeaways

- ✓ AI helps people work smarter
- ✓ Generative AI creates new content
- ✓ LLMs predict language
- ✓ AI Agents perform tasks
- ✓ Humans remain responsible
- ✓ Protect sensitive information

Quote for the Module

Learning AI isn't about keeping up with technology – it's about unlocking new opportunities for your career, your confidence, and your future.

Questions and Discussion

Questions

What AI tools have you already used?

What would you like AI to help you with?
